

Can a regular switch be cascaded with a PoE switch

Overview

Yes, a PoE switch can pass through a non-PoE switch. Use UPLINK port cascading. Cascading means that the switch is connected to the next layer of switches to extend the distance of the network cable, but only up to 5 levels can be cascaded, and the layer cascaded to the network terminal is then connected to the POE switch for power supply. The power draw would be too great. While it is quite rare and. PoE switches can transmit both data and electrical power over a single Ethernet cable, making them ideal for devices like IP cameras, wireless access points, and VoIP phones. In essence, a PoE Switch can be described as regular switch with added ability of Power over Ethernet which allows. It is generally safe to plug any PoE or non-PoE device into a PoE providing port. Is this possible?

Give POE from a POE switch.
