

Connecting a fiber optic switch to an optical transceiver

Overview

Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Direct attach cables with pre-terminated SFP connections may also be used. It serves a dual purpose — transmitting electrical signals as light pulses and receiving light pulses to convert them back into electrical form. Before you begin connecting a fiber-optic cable to an optical transceiver installed in an EX Series switch, ensure that you have taken the necessary precautions for safe handling. This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications. There are no specific requirements for this document. This includes Doppler. Refer to the recommended basic connection structure diagram to determine the network topology you are applying: 2.
