Intensity modulation

Intensity Modulation / Direct Detection (IM/DD) is a scheme that is simple and cost-effective in fiber optic communication, making it suitable for various optical communication applications. It involves modulating the optical power of the carrier signal to represent the transmitted data. This modulation can be achieved using techniques, such as on-off keying (OOK). The intensity-modulated optical signal is generated by modulating the amplitude or the current of the light source, typically a laser diode with on...
