

High beam control module loses communication

Overview

Drivers usually see a “headlamp malfunction” warning, dim or dead low-beams, and loss of high-beam operation. Common causes are wiring/connectors, module power loss, or corrupted module software. A scan tool, wiring continuity check, and module communication test are the first. Diagnosing a U0180 code, which indicates lost communication with the automatic high beam control module, requires a systematic approach. Start by connecting an OBD-II scanner to the vehicle's diagnostic port. This code typically affects vehicles equipped with advanced lighting systems that include high beam control modules and motors to. Now it will not communicate with ECM, TCM, ABS and BCM. If I unhook the battery, hook it back up I can communicate with everything for maybe 30 seconds, then they all lose communication again. If serial data communication is lost between any of.
