

How long are the optical fiber cables for communication in West Africa

Overview

The cable consists of four fibre pairs and is 14,530 km in length, linking from Yzerfontein in the Western Cape of South Africa to London in the United Kingdom. The West Africa Cable System (WACS) is a submarine communications cable linking South Africa with the United Kingdom along the west coast of Africa that was constructed by Alcatel-Lucent. In support of the focus on data, MTN has invested a total of USD 90 million in the subsea West Africa Cable. The West Africa cable infrastructure connects the company's subsidiaries as well as operators in the West African region to the international optical loop in Europe. The new cable is 9,414 km long and consists of two segments. The southern segment interconnects Morocco with Côte d'Ivoire, Togo, United Kingdom. Why Africa Needs ADSS Technology?

ADSS cables uniquely solve Africa's twin challenges: rapid network expansion and infrastructure.
