

How to connect the power supply to the rack splitter

Overview

Connect the provided 1x 24-pin and 1x 8-pin from your power supply to the 24-pin and 8-pin input on the Power Splitter. When installing the device in a closed or multi-rack assembly, please consider that, during operation, the ambient temperature, the mechanical loading and the electrical potentials will be different from those of devices which are not mounted into a rack. Make sure that the ambient temperature. The DISTRO4 4-Channel UHF Antenna Distribution System from RF Venue is an active antenna splitter designed to split the RF signal from two remotely mounted antennas and distribute it to up to 5 wireless receivers (antennas and receivers available separately). With Phanteks' Power Splitter, users will be able to run two fully functional systems with only one power supply. Each unit provides 8 channels of mic level splitting circuitry in a single rack space unit. The most common use being the input from an active GPS roof antenna or GPS simulator is split to thirty-two receiving GPS. signals in a CATV system.
