

# How to disconnect the power when replacing a distribution box

## Overview

You **MUST** turn off all electricity to the breaker box. Make sure the power is turned off at the meter on the outside of the house. You do not want any electricity coming to the panel at all, as you will be touching and working with the service wires that run from the meter to the. When the current is greater than the set value, the release will automatically disconnect the circuit to prevent overload or short circuit. When the circuit breaker is tripped, the contacts will. Replacing an old junction box can be a daunting task, but with the right tools and instructions, you can do it safely and efficiently. Here are the steps for replacement: step one: First, you need to make sure the power is completely shut off. Wear proper protective gear: Use insulated gloves, safety glasses, and non-conductive shoes. Use a non-conductive tool: This will prevent accidental.
