

## Imported Passive Optical Network OSFP

### Overview

OSFP (Octal Small Form Factor Pluggable) is a pluggable optical transceiver interface standard that supports eight electrical lanes (Tx/Rx) per module. Each lane can operate up to 100G PAM4, allowing total bandwidths of 400G or 800G depending on configuration. The OSFP MSA is proud to introduce OSFP1600 and OSFP-XD to the industry. This whitepaper highlights the key aspects and features of each solution with the expectation that both solutions will have a place in future data center applications. The OSFP-XD solution has attracted significant interest in. Cisco QSFP-DD and OSFP 800G ZR/ZR+ digital coherent optics modules enable 800G traffic over amplified Dense Wavelength-Division Multiplexing (DWDM) links up to 120 km for 800ZR and over 1000 km for 800G ZR+. Unlike the backward-compatible QSFP-DD, OSFP introduces a slightly larger mechanical form to. OSFP (Octal Small Form-factor Pluggable) modules are becoming increasingly important in achieving high-speed optical connectivity in the fast-growing world of data communications. 6T, enabling data center architectures to scale with evolving bandwidth and performance requirements. Designed to support 28G NRZ, 56G PAM4, 112G PAM4, and 224G PAM4. InnoLight 800G ZR OSFP product family is designed based on dual polarization quadrature amplitude modulation (DP-16QAM), supporting extended C-band, polarization diversity coherent detection and advanced electronic link equalization. The product supports 800Gbps transmission speeds in an.
