

Remote Configuration of KVM Switch

Overview

Abstract: Learn how to set up a KVM (Keyboard, Video, Mouse) switch over the Internet for remote access to multiple computers. This article provides step-by-step instructions and troubleshooting tips to ensure a seamless experience. KVM over IP is a remote management technology that enables you to control a server or computer at the BIOS level without being physically present at the target system. But how exactly do you remotely monitor port status?

The answer lies in KVM clients. WinClient and JavaClient both allow for remote access via IP connection so that you can log in to your servers from anywhere over. Remote Server Access (KVM Over IP) products are a new breed of non-intrusive hardware based solutions which allow you both in-band and out-of-band network access to all the servers connected to your KVM switch.
