

Shallow burial of optical cables

Overview

The short answer, based on general industry standards and the National Electrical Code (NEC), is that fiber optic cable is typically buried between 24 inches (60 cm) and 30 inches (76 cm) deep. However, simply hitting this depth isn't enough to guarantee your network survives. 8 million km in scope by 2025 (per TeleGeography), burying these cords of light comes with the benefits of avoiding cable damage, decreasing downtime, and extending their operational lifetime. But how deep is fiber optic cable buried?

Proper burial depth is essential to protect fiber optic cables from physical damage, environmental hazards, and signal degradation. Fiber optic cables transmit data. Installing a robust and reliable fiber optic network requires carefully determining the optimal burial depth. This comprehensive guide examines key factors influencing ideal burial.
