

Silicon Photonics Technology for Surveillance QSFP-DD

Overview

The silicon photonics transceiver is based on a new state-of-the-art silicon photonics (SiPh) platform. It uses SiPh chips that integrate a number of active and passive optoelectronic components, 3D packaging technology and 7nm DSP chips. Small Form-factor Pluggable (SFP) and Quad Small Form-factor Pluggable (QSFP) modules are integral components in optical networking, enabling high-speed communication over fibre-optic cables. As bandwidth demands grow, advances in laser technology like Directly Modulated Lasers (DML), Externally. Cisco designs and manufactures high-speed pluggable optical transceivers based on industry-leading silicon photonics technology platforms. Cisco pluggable optics based on silicon photonics enable customers to build the advanced networks required in hyper-scale data centers, enterprises, and mobile. The Hyper Photonix 400G QSFP-DD ZR+ HO (High Output) transceiver is a high performance, high output power, cost effective module for optical data communication applications from 100G to 400G. The high bandwidth module supports.
