Fiber optic technology is at the forefront of the telecommunications industry, providing rapid, efficient data transmission over vast. Jose Miguel Lopez-Higuera: Handbook of Optical Fiber Sensing Technology, John Wiley & Sons, 2002. P 603 Radiation absorption excites an orbital electron to a higher energy level. Radiation absorption creates electronic excited states that are trapped by localized defects for extended periods of. The text details different architectures, including quasi-distributed sensing with multiple gratings addressed by wavelength or time division multiplexing, and fully distributed sensing where the entire fiber acts as the sensor using effects like Rayleigh, Raman, or Brillouin scattering. These sensors are available at less cost, in small size.
