

The standard height setting for distribution boxes is as follows

Overview

Wall-mounted boxes should be 4. This height makes it easy to reach without bending or stretching. Ground-mounted boxes should be raised 2 to 4 inches to avoid. The proper installation of a distribution box involves placing it at the right height to ensure safety and convenience. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. I would note, however, if a feeder tap is made, then you will need to consider which tap rule and the distance required to install your OCPD to meet. Openings around boxes in noncombustible surfaces must not exceed $\frac{1}{4}$ inch to prevent fire spread. Boxes must be securely fastened to the structure using approved methods such as: Boxes must remain rigid and protected from physical damage.
