

What does LS mean in optical power meter

Overview

A laser source (LS) generates a stable optical signal at specific wavelengths. What is an Optical Power Meter?

An optical power meter (OPM) measures the strength of an. Fibre optic cable power meter and light source for multimode and singlemode cabling, LAN and telecom networks Instant results using the FiberMASTER Power Meter (PM) and Light Source (LS). The term usually refers to a device used for measuring the average power in fiber optic systems. Native duplex and multifiber (up to 24 fibers). Other dual hybrids are available per request. The FIS Power Meter is rugged, compact, and easy to use. Featuring a dynamic range of 70 dB for both standard and CATV variants, our power meters operate at the three most common wavelengths in the fiber optics industry today: 850, 1310 and 1550nm.
