

What fiber optic cable is used for home surveillance

Overview

The most common options are Cat5, Cat5e, Cat6, Cat6a, and fiber optic cables. Each has distinct characteristics, making them suitable for different applications. This blog post compares these cabling options to help you decide which is best for your security camera system. Cat5: An older Ethernet. IP cameras that are part of a modern surveillance system are deployed using PoE technology that involves the use of copper based network cabling like CAT5e or CAT6 that has a data transmission limit of 100m (328ft). While that is adequate for installations for a home or small business, large scale. While traditional copper cables have been the go-to choice for many, fiber optic cables have become increasingly popular due to their high speeds, reliable connectivity and resistance to interference. The type, quality, and installation of.
