

What to do if there is a broken optical fiber inside a cold splice

Overview

To fix a broken fiber, you must carefully peel away the protective layers to reach the thin glass inside. This process is called “stripping.” If the glass gets even a tiny scratch, the repair will fail, and you will have to start over. Adhering to precise methodologies, we can mend impaired cables. Whether you're facing a complete cable break or troubleshooting performance degradation, we will equip you with the knowledge to understand, diagnose, and address fiber optic cable damage or know when to call the professionals. Have a network installation project?

When you've located the damage. A fiber optic cable is cut or broken in the middle of the cable run and the two ends require splicing to re-connect them. With CommMesh's advanced tools and solutions, you'll learn how to restore networks seamlessly.
