

Which button on the switch is the optical port mode button

Overview

The mode button on a Cisco 9300 switch is located on the front panel of the switch. This button is used for various functions like resetting the device or clearing. Much like the previous console, buttons can be found on the rear of the Joy-Con that can be pressed to remove the controllers from the main body. It is typically a small, recessed button that can be pressed using a paperclip or similar small object. The ports/buttons are displayed from left to right: On/Off, Power, USB, TEL, LAN4, LAN3, LAN2, LAN1 (Corresponds to No. The button is displayed: Reset. Run the following command to view interface status information: `show port status <slot/port>` The output includes interface rate, duplex mode, module type, and link status (the link up state is a prerequisite for normal module operation).
