

Which type of aerial optical cable is best

Overview

This guide provides a thorough comparison of ADSS and OPGW cables, covering structure, electrical functions, installation, environmental resistance, applications, and more, to help you choose the best fit for your project. Aerial fiber optic cable is a specialized outdoor optical cable designed exclusively for overhead deployment. The choice of these two types depends on the installation location. If we want to install the fiber optic cable on a path that already has support and don't have to worry about the span of the fiber optic cable. Aerial work mixes mechanical engineering (span, sag, tension), careful selection of cable types (ADSS, figure-8, lashed) and a disciplined safety-first attitude. It eliminates the need for expensive underground trenching and comes with an integrated messenger wire for faster deployment.
